Bangalore, Karnataka, India | Open to Relocation | Full-Time · Remote · Contract · Freelance | Available Immediately

PROFESSIONAL SUMMARY

Full-stack MERN developer with 5+ years shipping production systems — from a 10M+ user job-portal migration (Foundit/Monster.com) to enterprise insurance software and a self-built AI SaaS product with live payments. Comfortable owning a feature end-to-end: architecture, backend APIs, frontend delivery, and deployment, not just implementation. Recognised by senior leadership at Foundit for delivery quality, and currently deepening TypeScript and LLM API integration through hands-on production work.

TECHNICAL SKILLS

Core Stack: MERN (MongoDB, Express.js, React.js, Node.js), Next.js (App Router), REST APIs

Frontend: React.js, Next.js (App Router), Redux Toolkit, Zustand, Tailwind CSS, HTML, Thymeleaf, SEO, SCSS, Material UI, Vue.js, Angular

Backend: Node.js, Express.js, REST APIs, WebSockets, Redis, Form.io, MVC Architecture

Database: MongoDB, Mongoose, PostgreSQL, MySQL

Cloud & DevOps: Docker, CI/CD, Git, GitHub Actions, Jenkins, Nginx, Grafana, Graylog, Elastic APM

Auth & Integrations: JWT, bcrypt.js, Google/GitHub OAuth, Authentication, Razorpay, Stream-Chat, Twilio, CleverTap, SendGrid

Currently Deepening: TypeScript, LLM API Integration (Gemini), Claude AI, Prompt Engineering, DSA in JavaScript, Gen-AI

PROFESSIONAL EXPERIENCE

SpeckyFox Technologies India Pvt. Ltd. — Software Engineer

Oct 2021 – Jun 2024

Vendor-side engineer embedded across three concurrent client products, from a 10M+ user consumer platform to enterprise B2B software.

Client 1: Foundit (formerly Monster.com) — India's Largest Job Portal (10M+ Active Users)

Stack: MERN Stack — JavaScript, React.js, Node.js, Express.js, MongoDB, Vue.js, Thymeleaf, Graylog, Elastic APM, ArgoCD, Jenkins, CMS, CleverTap

- **Owned front-end architecture and SEO structure** for the full Monster.com → Foundit migration, rebuilding the UI system for 10M+ active users — recognised at senior leadership level as a team achievement.
- **Built a real-time, DB-driven XML sitemap generator** (Search-XML) that closed indexing gaps across thousands of job listings, improving search-engine crawlability.
- **Instrumented the seeker journey in CleverTap** across multiple event types, giving Product a reliable data foundation for A/B testing and behaviour-driven decisions.
- **Partnered with Product and Design** to establish a shared design system and style guide, cutting UI inconsistency and speeding up developer handoffs across modules.
- **Became the team's go-to CMS and routing expert** — owning ingress configuration and acting as the cross-team knowledge source for backend request flow.
- **Kept production stable** through proactive monitoring in Graylog and Elastic APM, supporting reliable weekly releases via Jenkins and ArgoCD.
- **Sustained a 100% Jira task completion rate across 2+ years** — highlighted by the Product team as a standout performer among peers.

Client 2: ChainThat (Xceedance) — Enterprise Insurance Digitization Platform

Stack: JavaScript, Angular, CSS, Form.io, Git, Github, Code-Review

- **Replaced paper-based insurance workflows** with a Form.io-powered Angular UI handling multi-state regulatory rule sets, state-specific schemas, and premium-calculation logic.
- **Engineered a reusable Angular component library** for dynamic form rendering, abstracting state-specific insurance rules into configurable components — cutting duplication and speeding feature delivery.
- **Enforced jurisdiction-specific compliance** with schema-driven form validation, so coverage and endorsement rules held up across regulatory changes without hardcoded conditions.
- **Ensured financial accuracy** through precise data binding between dynamic forms and backend APIs, critical to correct premium computation and endorsements.
- Delivered a modular, well-tested, mobile-first codebase with hands-on post-launch support.

Client 3: Ray-Ban — Global Brand Marketing Website

Stack: MERN Stack — React.js, Node.js, Express.js, MongoDB, JavaScript, CSS, Nodemailer, Twilio

- **Built interactive carousels and reusable UI components** with responsive, cross-browser layouts for a globally recognised consumer brand.
- **Implemented registration and login flows**, integrating authentication UI with backend services across desktop and mobile.
- **Designed a product catalogue and filtering system** — dynamic listing pages with client-side filters for frame type, lens, and collection, backed by an optimised MongoDB schema for fast search and retrieval.

Independent Freelance Developer • Current

Jun 2024 – Present

Mentored by a senior engineer (15+ yrs) · International client engagements

Client: Dubai-Based (Confidential) — Corporate Social Networking Web App

Stack: MERN Stack — React.js, Redux, Node.js, Express.js, MongoDB, Material-UI, Stream-Chat, Twilio, Google Auth, JWT

- **Shipped a full-stack corporate social platform end-to-end** — real-time messaging via Stream-Chat, Google OAuth + JWT auth, posts, comments, likes, and group channels — delivered within an 8-week timeline.
- **Architected a clean MVC codebase** with single-like middleware enforcement, paginated search, and Twilio notifications.
- **Secured the platform** with JWT-based stateless auth, bcrypt password hashing, and role-aware group-channel permissions for scalable multi-user access.

Client: Dubai-Based (Confidential) — B2B Employee Microlearning Platform

Stack: MERN Stack — React Hooks, React Router v6, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, REST APIs

- **Delivered a production SaaS microlearning platform** — course viewer, quiz engine, and progress dashboard — for companies to build and track employee training.
- **Cut initial load time by ~40%** using React.lazy code-splitting and dynamic routing; built fully responsive Tailwind layouts across 5+ course modules.
- **Designed and built the RESTful backend** in Node.js/Express — course content APIs, quiz submission endpoints, progress persistence in MongoDB, and role-based access separating admin and employee workflows.

KEY PROJECTS & OPEN SOURCE

GitRoast — AI-Powered GitHub Profile Roast Generator

Personal Project · Sole Developer · github.com/sammy-cool/gitroast-dev | gitroast-dev.vercel.app

Stack: Next.js 16 (App Router), Express.js, MongoDB Atlas, Google Gemini 2.5 Flash, Razorpay, GitHub OAuth, JWT, Docker, Vercel, Render

- **Designed and shipped an AI SaaS product end-to-end, solo** — generates GitHub profile “roasts” using Google Gemini 2.5 Flash, analysing commit history, repo abandonment, README quality, and language patterns across 8+ signals.
- **Built complete monetisation via Razorpay** (UPI, cards, netbanking) with HMAC SHA256 signature verification and MongoDB-backed Pro-tier unlocking — generating real revenue with zero third-party subscription overhead.
- **Engineered the Next.js App Router frontend** with SSR per-roast OG/Twitter metadata, skeleton loaders, next/font for zero layout shift, and a custom hydration wrapper for consistent loading behaviour.
- **Designed viral sharing mechanics** — shareable roast cards, HD PNG export via html2canvas for Pro users, pre-filled Twitter/X sharing, a public leaderboard, and head-to-head “Roast Battles” with AI-generated verdicts.
- **Built a production-grade Express backend** — rate limiting, JWT auth, GitHub OAuth, CORS, graceful shutdown — containerised with Docker and deployed on Render with health checks.

Customizable Toast Notification — Published npm Package

Author & Maintainer · Open Source · npmjs.com/package/customizable-toast-notification | github.com/sammy-cool/toast-notification

Stack: JavaScript (ES6+), React.js, CSS, Rollup.js

- Published a framework-agnostic toast library for Vanilla JS and React with a minimal, tree-shaken bundle via Rollup.js.
- Designed a clean developer API for content, position, theme, animation, queuing, and callbacks, with full documentation and CodeSandbox demos.
- Built a zero-dependency, queue-managed core that controls simultaneous toasts and auto-dismiss timing without risking version conflicts in consumer projects.

EDUCATION & CERTIFICATION

B.Sc. in Computer Science — Microtek College of Management & Technology, Jaunpur, Uttar Pradesh 2019

Full Stack Web Development (MERN) — DCT Academy, Bengaluru — [View Certificate \(drive.google.com\)](#) 2020

Languages: English (Professional), Hindi (Native) | Interests: Open Source, UI/UX, Web Performance, Automation, Photography, Cricket, Travel
